

Why Study Geography? – Ask a current Camp Hill geographer...!

'To me, geography was definitely a no brainer. I certainly don't regret that decision, because despite home learning, geography has been a topic that I truly enjoy and feel that I can get immersed in. It's a lot of fun and I recommend it.'

'You don't just learn about rocks and rivers, you learn about social and global issues, and cultures too.'

'GCSE Geography is a thrilling and dynamic subject, with innumerable cross-curricular links. It provides an incredibly versatile and holistic view of the world we live in, how it is shaped and how we can impact it down to the most minuscule of processes. If you would like to be part of an endless adventure to discover what makes up our planet, not just rivers and rocks, but other relevant issues, I'd highly recommend picking geography!'

'I love geography because you don't just learn about one aspect of it, there is a wide range of topics from global warming to rivers (as well as topical links to things like Brexit and EU).'

'It acts as a fundamental for sciences, as some aspects of the chemistry course ('Chemistry of the atmosphere'), physics course ('Seismic waves and radioactivity') and biology course ('Ecology and biodiversity') closely link together!'

'GCSE Geography offers a great balance between writing and mathematical skills!'

'It allows you to explore the world in more detail and understand the reasons behind different government policies, or why some countries are the way they are, as well as provide you with interesting facts about the physical landscapes of the world, unique to particular areas.'

'GCSE Geography encourages wider thinking and expands your horizons, broadening your knowledge and interests.'
